

EFW ALUMNI COMMUNITY

Update PDFs, Leadership Openings, and the LinkedIn Welcome Post

Step-by-step GitHub guide for non-developer administrators

Purpose Use this guide when the Adult Education and Employment PDF changes, a Leadership Team position opens or closes, or the LinkedIn welcome post link needs to be replaced.

Item	Example
Branch for editing	dev-info
PDF folder	/assets/documents/
Resource page data	/_data/edu-resources/full-resources.yml
Leadership page	/pages/get-involved.html
LinkedIn setting	/_config.yml
Pull Request destination	dev

Companion guide For detailed YAML editing, commits, and Pull Request instructions, refer to EFW_GitHub_YAML_Update_and_PR_Guide_EN.pdf.

Version 1.0 | July 2026

Quick Overview

1. Sign in to GitHub and open the alumni-efw/alumni-efw.github.io repository.
2. Change the branch to dev-info before editing anything.
3. Find the file listed in the relevant section of this guide.
4. Make only the required change and preview it carefully.
5. Commit the change directly to dev-info.
6. When all related changes are complete, create one Pull Request from dev-info to dev.

Important A PDF update normally requires several related changes. Complete the file upload, YAML date and path changes, and webpage content updates before requesting review.

Before You Start

- Obtain the final, approved PDF or content.
- Confirm the PDF's last-edited date.
- Copy important text exactly, including dates and full web addresses.
- Keep the existing code indentation, quotation marks, and surrounding HTML.

How GitHub Comments Work

HTML comments hide code without deleting it. Place `<!--` before the code and `-->` after it.

Item	Example
Active code	<code>Apply Now</code>
Commented out	<code><!-- Apply Now --></code>

1. Update the Adult Education and Employment PDF

Files involved

/assets/documents/

/_data/edu-resources/full-resources.yml

the related resource data files under /_data/edu-resources/ folder used by the webpage

1.1 Add the New PDF

1. Rename the approved PDF so the filename includes the last-edited month and year.
2. Use a clear filename with no spaces. Keep the .pdf extension.
3. On the dev-info branch, open the /assets/documents/ folder.
4. Select Add file, then Upload files.
5. Choose or drag the renamed PDF into GitHub.
6. Commit the uploaded file directly to *dev-info*.

Item	Example
Recommended pattern	Adult_Education_Employment_Resources_MonthYYYY.pdf
Example	Adult_Education_Employment_Resources_July2026.pdf

Do not overwrite the old file Upload the new dated file as a separate file. The website will use it only after you update the pdf field.

1.2 Update the PDF Path in full-resources.yml

1. Open /_data/edu-resources/full-resources.yml on the *dev-info* branch.
2. Select the pencil-shaped Edit this file button.
3. Find the line that begins with pdf: (line 7).
4. After pdf:, replace the old path with the complete path and new filename.
5. Confirm that the path begins with /assets/documents/ and ends with .pdf.

Field	Example
-------	---------

pdf:	pdf: /assets/documents/Adult_Education_Employment_Resources_July2026.pdf
------	---

Easy copy method Open the new PDF file in GitHub and copy its path/filename. Paste the complete value after pdf: so no folder name or character is missed.

1.3 Update the “updated: ” field

1. In the same *full-resources.yml* file, find the line that begins with *updated:* (line 6).
2. Replace the old date with the new PDF's last-edited date.
3. Write the month in English and use the format Month D, YYYY.

condition	Example
Before	updated: June 16, 2026
After	updated: July 28, 2026

1.4 Update the Webpage Content

Compare the updated PDF with the current Adult Education and Employment webpage. Update the website data so the page and PDF contain the same current information.

1. Review the PDF section by section and identify added, removed, or revised programs, links, contact details, dates, and descriptions.
2. Use *EFW_GitHub_YAML_Update_and_PR_Guide_EN.pdf* to find and edit the related YAML files.
3. Preserve the existing YAML structure and indentation.
4. Preview each change and commit it directly to dev-info.
5. Check that the webpage content, PDF link, and Last updated date all agree.

Final PDF check Open the new PDF from its GitHub file page and verify that it is the correct document. After deployment, also test the View Original PDF button on the webpage.

2. Open a Leadership Team Position

File to edit: */pages/get-involved.html*

1. Open */pages/get-involved.html* on the dev-info branch.
2. Select the pencil-shaped *Edit this file* button.
3. Near the bottom of the file, find the *Apply Now* button code containing `class="btn-green"`.
4. If the button code is inside `<!--` and `-->`, remove only those comment markers to activate the button.
5. Find the *open-role-note* code that says when the role is expected to open.
6. Wrap the full open-role-note code line in `<!--` and `-->` to hide it.
7. Preview the change and commit it directly to dev-info.

Find text in code	Example
Apply Now	Remove <code><!--</code> and <code>--></code> so the btn-green code is active.
open-role-note	Add <code><!--</code> before and <code>--></code> after the open-role-note line.

Check the pair When a position is open, Apply Now should be active and the future-opening note should be commented out.

```
<h3 class="card-title">Join the Leadership Team</h3>
<p class="mb-2">Help organize community activities, welcome new members, support communication channels, plan events, keep
<a class="btn-green" href="https://registrationforms.fillout.com/t/mvMbTbyCUTus" target="_blank">Apply Now</a>
<!--<p class="mt-auto pb-3 open-role-note">* Open roles will be posted here in September</p-->
</div>
```

3. Close a Leadership Team Position

Use the reverse of the opening process in */pages/get-involved.html*.

1. Find the *open-role-note* that tells visitors when the role is expected to open.
2. Remove the surrounding `<!--` and `-->` comment markers to show the note.
3. Find the Apply Now button code above the note.
4. Wrap the complete Apply Now button code in `<!--` and `-->` to hide it.
5. Preview the change and commit it directly to dev-info.

Find text in code	Example
Apply Now	Add <code><!--</code> before and <code>--></code> after the complete btn-green code.

open-date-note	Remove <!-- and --> so the open-role-note is active.
-----------------------	--

Check the pair When a position is closed, Apply Now should be commented out and the future-opening note should be visible.

```
<h3 class="card-title">Join the Leadership Team</h3>
<p class="mb-2">Help organize community activities, welcome new members, support communication channels, plan events, k
<!--<a class="btn-green" href="https://registrationforms.fillout.com/t/mvMbTbyCUTus" target="_blank">Apply Now</a>-->
<p class="mt-auto pb-3 open-role-note">* Open roles will be posted here in September</p>
```

4. Update the LinkedIn Welcome Post Link

Use this process during the registration season when new alumni members join.

1. Create and publish the welcome post on LinkedIn first.
2. Open the published post and copy its full link address.
3. In GitHub, confirm that you are on the *dev-info* branch.
4. Open */_config.yml* and select the pencil-shaped *Edit this file* button.
5. Find *linked_in_welcome_post_link*:
6. Replace only the web address after the colon with the new LinkedIn post link.
7. Confirm that the complete address begins with *https://*.
8. Preview the change and commit it directly to dev-info.

Item	Example
Field	linked_in_welcome_post_link:
Example	linked_in_welcome_post_link: https://www.linkedin.com/posts/...

Link check Open the copied address in a new browser tab. Confirm that it goes directly to the published welcome post, not to the LinkedIn home page or organization profile.

5. Request Review with One Pull Request

After all required files have been updated and committed to dev-info, create one Pull Request.

1. Open the repository's Pull requests tab.
2. Select New pull request.
3. Set base to dev and compare to *dev-info*.
4. Review the changed files and confirm that only the intended content changed.
5. Create the Pull Request and send it to the developer for review.

base: dev ← compare: dev-info

Detailed PR instructions Follow EFW_GitHub_YAML_Update_and_PR_Guide_EN.pdf for screenshots-level guidance on commits and Pull Request creation.

Final Checklist

- I edited files only on *dev-info* branch.
- The adult edu pdf path and updated date in full-resources.yml are correct.
- The webpage content matches the updated PDF.
- The leadership button and note are in opposite active/commented states.
- The LinkedIn address opens the correct published welcome post.
- The Pull Request uses base: dev and compare: dev-info.

Need help? If the Preview changes view shows unexpected deletions, or if you are unsure where a PDF content change belongs, stop before committing and ask the developer to review the file.
